Activation:**

RATIONALE

The stadium Emergency Management Plan has been reviewed and is updated regularly. All vomitory exits are paths of travel to Evacuation points and should remain clear.

Due to the numbers of patrons attending events the vomitories need to be available in case an Emergency arises, and the Seating bowl needs to be evacuated via the FOP. The Northwest & Southwest vomitories **should not be used** for events as these are dedicated Emergency Exits at all times and must be kept clear. During events the southwest Vomitory houses ambulances and crews that can be removed at any time. These ambulances are never left unattended and can be moved immediately as required. The Northeast vomitory is used by the grounds team for access to the FOP.

The Southeast Vomitory may be used for events however any structure installed in the vomitory must be on wheels and be able to be rolled onto the FOP in the event of an emergency. Stage Structures must use Pneumatic Wheels and be approved by the Grounds Manager for use on the FOP. The wheels must be specified to carry the relevant weight of the structure. If a Ute is used this may be driven up the Vomitory to the Ring Road. The vehicle should be reversed in, and the vehicle not left unattended. Forward facing vehicles must be approved by the Chief Warden. A driver must be available to move the vehicle and keys must not be left in the vehicle at any stage. As a last resort if approval is given to use the NW vomitory for an event it must be the same Ute type as above. This must be driven up the Vomitory to the Ring Road in an emergency, the vehicle must be reversed in, and the vehicle not left unattended. A Management in use (MIU) has been written to cover the use of this vomitory. The Chief Warden must be consulted and approve any usage of Vomitories on a case-by-case situation.

Hirer

Have the plans been provided to the stadium for review.

The structure is on suitable wheels that meet the requirements of the ground management team.

Have you provided the weight of the structure.

Are there sufficient staff on site to relocate it in case of emergency.

What is the timeline to move the structure in minutes.

The structure or activation is not permitted to restrict seating viewpoints.

If power is required, this must be discussed with assets.

The SWMS and insurances must be provided to the stadium prior to the activation.

All rubbish and screws are to be removed.

Vomitory Usage for Events Checklist

SIGN OFF

A representative of the hirer will tick the box to indicate that you have read and understood the checklist and provided the documentation requested.

Reliance Risk will need to sign that they have inspected the Vomitory and that the structure meets the requirements above.

Chief Warden must be notified of the activity prior to the event.
